ABSTRACT	1
1. INTRODUCTION	1
2. RECEIVER SYSTEM ARCHITECTURE	3
2.1 Cellular Downconverter	4
2.2 Digital Downconverter	4
2.2.1 Channel Filtering	4
2.2.2 Demodulation	6
2.3 Audio Output Processing	6
2.3.1 Audio Processing Performed on the Digital Downconverter	7
2.3.2 Audio Processing Performed on the Analog Audio Processor	7
3. SIGNAL OBSERVATION, PROCESSING, AND DISPLAY AT VARIOUS RECEIVER STAGES	7
4. RECEIVER TEST PLAN	8
4.1 Digitized IF Output Testing	8
4.1.1 Self-Generated Spurious Response Test	8
4.1.2 Desired Input Signal Spectrum Test	9
4.1.3 Aliasing Test	11
4.1.4 Image Frequency Test	12
4.1.5 Small Signal Plus Large Signal Test	13
4.2 Digitized Baseband Output Testing	13
4.2.1 Channel Filter Test	13
4.2.2 Desired Input Signal Baseband Spectrum Test	14
4.3 Digitized Demodulator Output Testing	15
4.4 Analog Audio Output Testing	15
4.4.1 Adjacent and Alternate Channel Desensitization	15
4.4.2 Intermodulation Spurious Response Attenuation	16
4.4.3 Protection Against Spurious-Response Interference	17
5. SUMMARY AND CONCLUSIONS	20
6. ACKNOWLEDGMENTS	21
7. REFERENCES	22
